**COMMISSIONERS/STAFF COMMENTS**

Commissioner Nevarez stated that he previously attended a training that indicated you only go by what is included in the packet which is why he has questions and comments. Commissioner Lucero stated that the technical equipment does not work well and if some want to use it then it should be worked on to ensure it works well and everyone can hear and be heard. Mr. Padilla announced this will be his last week with the Town of Mesilla. Mr. Padilla thanked everyone and expressed the joy he has had working with everyone. Commissioner Nevarez thanked Mr. Padilla for all the work he has done as it was a learning curve to come on the job and he has done a tremendous job with various improvements. He stated that he personally appreciates the work he has done. Commissioner Lucero wished Mr. Padilla well and thanked him for the work he has done with the Town of Mesilla. Mr. Maese stated he appreciates the guidance he has received from Mr. Padilla regarding the packets as they are quite thick.

# SOLAR SMART LIVING SOLAR HOME IMPROVEMENT CONTRACT

For Solar System Installations in the State of New Mexico and the State of Texas

## Section 1:

Date: July 15, 2022

This Home Improvement Contract for Solar System Installation (along with all schedules and exhibits attached hereto, this "Contract") is entered into as of the date listed above (the "Effective Date") by Consumer and Contractor, each a "Party" and together the "Parties". The following key terms are an integral part of the Contract:

### **Solar System Specifications:**

System Size in DC kW	<u>7.200</u>
Estimated 1st year Production in kWh	<u>12,184</u>
Module Quantity and size	<u>18 x 400 W</u>
Module Manufacturer	<u>Hanwha Q CELLS</u>
Inverter Manufacturer	<u>SolarEdge</u>
Monitoring Type	<input checked="" type="checkbox"/> Internet <input type="checkbox"/> Cellular

### **Price:**

Solar System Price	<u>27,024</u>
Other Home Improvement Price	<u>0</u>
Other	<u>0</u>
Other	<u>0</u>
Total Contract Price	<u>27,024.00</u>
Down Payment	<u>0.00</u>
Balance Due	<u>27,024</u>
Down Payment Due Date	<u>Loan</u>
Payment Type	<u>MOS PowerSwitch Loan</u>

### **Project Timeline**

Approximate Start Date	<u>2022-07-12</u>
Approximate Completion Date	<u>2022-09-04</u>

### **Job Site ("Property")**

Micaela Cadena  
2869 Calle Del Sur  
Las Cruces, NM 88005

**Section 19 Additional Rights.**

19.1 Three-day Right to Cancel. **You, the buyer, have the right to cancel this Contract within three (3) Business Days.** You may cancel by e-mailing, mailing, faxing, or delivering a written notice to the Contractor at the Contractor’s place of business by midnight of the third Business Day after you received a signed and dated copy of the Contract that includes this notice. Include your name, your address, and the date you received the signed copy of the Contract and this notice. If you cancel, we must return to you anything you paid within ten (10) days of receiving the notice of cancellation. For your part, you must make available to the Contractor at your residence, in substantially as good condition as you received them, goods delivered to you under this Contract or sale. Or, you may, if you wish, comply with the Contractor’s instructions on how to return the goods at the Contractor’s expense and risk. If you do make the goods available to the Contractor and the Contractor does not pick them up within twenty (20) days of the date of your notice of cancellation, you may keep them without any further obligation. If you fail to make the goods available to the Contractor, or if you agree to return the goods to the Contractor and fail to do so, then you remain liable for performance of all obligations under the Contract.

IN WITNESS WHEREOF, the Parties hereto have executed this Home Improvement Contract as of the Effective Date.

## SOLARMOUNT Flush Product Assumptions

---

*Limitations of Responsibility: It is the user's responsibility to ensure that inputs are correct for your specific project. Unirac is not the solar, electrical, or building engineer of record and is not responsible for the solar, electrical, or building design for this project.*

**Allowable spans and resulting point loads are subject to the following conditions:**

1. Building Height  $\leq$  60 ft unless otherwise specified.
2. Roof Slope  $\geq$  1.2°
3. Maximum rail cantilever  $\leq$  1/3 of selected span.
4. Occupancy/Risk Category = II unless otherwise specified.
5. ASCE 7-05: Basic Wind Speed: 85-170 mph (IBC 2006/ASCE 7-05). Wind Exposure: B, C or D.
6. ASCE 7-10: Basic Wind Speed: 95-190 mph (IBC 2012/ASCE 7-10). Wind Exposure: B, C or D.
7. ASCE 7-16: Basic Wind Speed: 85-190 mph (IBC 2018/ASCE 7-16). Wind Exposure: B, C or D.
8. Ground Snow Load: 0-100 psf. (Reduction can be input if this is acceptable with your local building authority). Results are based on uniform snow loading and do not consider unbalanced, drifting, and sliding conditions.
9. Dead Load  $\leq$  5 psf (includes PV Modules and Racking).
10. Maximum PV Module Length: 85 in.
11. Seismic: Installations must be in seismic site class A, B, C, or D as defined in IBC 2006/ASCE 7-05.
12. Intermediary Span Distances: Roof attachment point loads be reduced linearly if the installed distance between the attachments is less than the selected span. For example, if the spacing is half the amount shown in the results, then the point loads may also be reduced by half.
13. Spans greater than 96 in.: While our products are valid for greater spans in many instances, we do not recommend this mounting configuration. Typical residential roofs are not designed for the larger point loads that might result from such excessive spans and we recommend final design by a licensed professional engineer of responsible charge.

### **Pitched Roof Solutions (Flush Mounted Solutions):**

Modules are parallel to the roof surface and within 10 in. of it.

Allowable roof pitch: 1.2°-45°. (SM is not fire tested for sloped of  $<$  2:12, please check with your AHJ if this is acceptable.)

Building has a monoslope roof with a slope  $\leq$  3°, a gable roof  $\leq$  45°, or a hip roof  $\leq$  27°.

Re: Engineering Certification for the Unirac U-Builder 2.0 SOLARMOUNT Flush Rail

PZSE, Inc. - Structural Engineers has reviewed the Unirac SOLARMOUNT rails, proprietary mounting system constructed from modular parts which is intended for rooftop installation of solar photovoltaic (PV) panels; and has reviewed the U-builder Online tool. This U-Builder software includes analysis for the SOLARMOUNT LIGHT rail, SOLARMOUNT STANDARD rail, and SOLARMOUNT HEAVY DUTY rail with Standard and Pro Series hardware. All information, data and analysis contained within are based on, and comply with the following codes and typical specifications:

1. Minimum Design Loads for Buildings and other Structures, ASCE/SEI 7-05, ASCE/SEI 7-10, ASCE/SEI 7-16
2. 2006-2018 International Building Code, by International Code Council, Inc. w/ Provisions from SEAOC PV-2 2017.
3. 2006-2018 International Residential Code, by International Code Council, Inc. w/ Provisions from SEAOC PV-2 2017.
4. AC428, Acceptance Criteria for Modular Framing Systems Used to Support Photovoltaic (PV) Panels, November 1, 2012 by ICC-ES.
5. 2015 Aluminum Design Manual, by The Aluminum Association, 2015

Following are typical specifications to meet the above code requirements:

<b>Design Criteria:</b>	Ground Snow Load = 0 - 100 (psf) Basic Wind Speed = 85 - 190 (mph) Roof Mean Height = 0 - 60 (ft) Roof Pitch = 0 - 45 (degrees) Exposure Category = B, C & D
<b>Attachment Spacing:</b>	Per U-builder Engineering report.
<b>Cantilever:</b>	Maximum cantilever length is $L/3$ , where "L" is the span noted in the U-Builder online tool.
<b>Clearance:</b>	2" to 10" clear from top of roof to top of PV panel.
<b>Tolerance(s):</b>	1.0" tolerance for any specified dimension in this report is allowed for installation.
<b>Installation Orientation:</b>	See SOLARMOUNT Rail Flush Installation Guide. Landscape - PV Panel long dimension is parallel to ridge/eave line of roof and the PV panel is mounted on the long side. Portrait - PV Panel short dimension is parallel to ridge/eave line of roof and the PV panel is mounted on the short side.

### Components and Cladding Roof Zones:

The Components and Cladding Roof Zones shall be determined based on ASCE 7-05, ASCE 7-10 & 7-16 Component and Cladding design.

- Notes:
- 1) U-builder Online tool analysis is only for Unirac SM SOLARMOUNT Rail Flush systems only and do not include roof capacity check.
  - 2) Risk Category II per ASCE 7-16.
  - 3) Topographic factor,  $k_{zt}$  is 1.0.
  - 4) Array Edge Factor  $Y_E = 1.5$
  - 5) Average parapet height is 0.0 ft.
  - 6) Wind speeds are LRFD values.
  - 7) Attachment spacing(s) apply to a seismic design category E or less.

### Design Responsibility:

The U-Builder design software is intended to be used under the responsible charge of a registered design professional where required by the authority having jurisdiction. In all cases, this U-builder software should be used under the direction of a design professional with sufficient structural engineering knowledge and experience to be able to:

- Evaluate whether the U-Builder Software is applicable to the project, and
- Understand and determine the appropriate values for all input parameters of the U-Builder software.

This letter certifies that the Unirac SM SOLARMOUNT Rails Flush, when installed according to the U-Builder engineering report and the manufacture specifications, is in compliance with the above codes and loading criteria.

This certification excludes evaluation of the following components:

- 1) The structure to support the loads imposed on the building by the array; including, but not limited to: strength and deflection of structural framing members, fastening and/or strength of roofing materials, and/or the effects of snow accumulation on the structure.
- 2) The attachment of the SM SOLARMOUNT Rails to the existing structure.
- 3) The capacity of the solar module frame to resist the loads.

This requires additional knowledge of the building and is outside the scope of the certification of this racking system.

If you have any questions on the above, do not hesitate to call.

Use Table 11 and 12 to select a lag bolt or concealor screw size and embedment depth to satisfy your Uplift Point Load Force,  $R_u$  (lbs), requirements.

It is the installer's responsibility to verify that the substructure and attachment method is strong enough to support the maximum point loads calculated according to Step 4 and Step 5.

Sources: American Wood Council, NDS 2005, Table 11.2A, 11.3.2A.

Notes: (1) Thread must be embedded in the side grain of a rafter or other structural member integral with the building structure.

(2) Lag bolts must be located in the middle third of the structural member.

(3) These values are not valid for wet service.

(4) This table does not include shear capacities. If necessary, contact a local engineer to specify lag bolt size with regard to shear forces.

(5) Install lag bolts with head and washer flush to surface (no gap). Do not over-torque.

(6) Withdrawal design values for lag screw connections shall be multiplied by applicable adjustment factors if necessary. See Table 10.3.1 in the American Wood Council NDS for Wood Construction.

\*Use flat washers with lag screws. Flat washers are not necessary with concealor screws.

## 10 year limited Product Warranty

Unirac, Inc., warrants to the original purchaser ("Purchaser") of product(s) that it manufactures ("Product") at the original installation site that the Product shall be free from defects in material and workmanship for a period of ten (10) years, from the earlier of 1) the date the installation of the Product is completed, or 2) 30 days after the purchase of the Product by the original Purchaser.

The Warranty does not apply to any foreign residue deposited on the finish. All installations in corrosive atmospheric conditions are excluded. This Warranty does not cover damage to the Product that occurs during its shipment, storage, or installation.

This Warranty shall be VOID if installation of the Product is not performed in accordance with Unirac's written installation instructions and design specifications therein, or if the Product has been modified, repaired, or reworked in a manner not previously authorized by Unirac IN WRITING, or if the Product is installed in an environment for which it was not designed. Unirac shall not be liable for consequential, contingent or incidental damages arising out of the use of the Product by Purchaser under any circumstances.

If within the specified Warranty period the Product shall be reasonably proven to be

defective, then Unirac shall repair or replace the defective Product, or any part thereof, in Unirac's sole discretion. Such repair or replacement shall completely satisfy and discharge all of Unirac's liability with respect to this limited Warranty. Under no circumstances shall Unirac be liable for special, indirect or consequential damages arising out of or related to use by Purchaser of the Product.

Manufacturers of related items, such as PV modules and flashings, may provide written warranties of their own. Unirac's limited Warranty covers only its Product, and not any related items.

## Glossary

- **ASCE 7-05** = The most current standard referenced in the International Building Code 2006 used to calculate minimum design loads for buildings and other structures.
- **$p_{net}$ , Design Wind Load (psf)** = the calculated load due to wind using ASCE 7-05 Standard
- **$\lambda$ , adjustment factor for height and exposure category** = a weighted factor to increase or decrease the wind load based on local geography and building height
- **$K_{zt}$ , Topographic Factor at mean roof height, h (ft)** = a weighted factor to increase or decrease the wind load based on local topography
- **I, Importance Factor** = a weighted factor to increase or decrease the load based on occupancy usage.
- **$p_{net30}$  (psf), net design wind pressure for Exposure B, at height, h = ft, Importance Factor, I = 1** = a value for wind load used in Method 1 for calculating wind load for components and cladding
- **V (mph), Basic Wind Speed** = the largest 3 second gust of wind recorded in the last 50 years in a local area
- **h, roof height (ft)** = total roof height for flat roof buildings or mean roof height for pitched roof buildings
- **A, Effective Wind Area (sf)** = minimum total continuous area of modules being installed
- **Roof Zone** = the relative location on the roof in which you are installing the pv system according to Figure 2, page ???
- **a, Roof Zone setback length (ft)** = the distance from the edge of a roof that determines the boundaries of the roof zones defined in ASCE 7-05
- **Roof Pitch (degrees)** = the slope of the roof of a building or structure measured at an acute angle to the horizon
- **Exposure Category (B, C, D)** = a classification of the surface roughness of the surrounding terrain
- **Downforce** = the positive value of wind load calculated perpendicular and toward the surface of a structure
- **Uplift** = the negative value of wind load calculated perpendicular and away from the surface of a structure
- **D, Dead Load (psf)** = the self weight on a structure or component of a structure over a given area
- **S, Snow Load (psf)** = the required design load due to snow
- **P, Total Design Pressure (psf)** = the resultant load calculated using Dead, Snow and Wind as factors
- **w, distributed load (plf)** = the average load per foot applied to a beam or other member
- **B, module length perpendicular to rails (ft)** = the length of a solar module measured perpendicular to the beams or rails of a racking system
- **L, Beam Span or Foot Spacing (ft)** = the unsupported distance between supports on a beam, the distance between connections on a beam or rail
- **R, Point Load (lbs)** = the amount of force applied at the point of contact of the racking system to the substructure
